With over 30 years' experience in developing and supporting advanced non-profit software, Fusion Labs currently provides packaged software to support the complex and highly regulated environments of many of the largest U.S. and international foundations and non-profit organizations. For instance, nonprofits that use Blackbaud's Raiser's Edge, a solution that performs fundraising and relationship management, and Financial Edge, an accounting solution, have no way to synchronize fund and constituent/vendor information between the two products. **Sync Harmony** is the missing link that integrates Financial Edge and Raiser's Edge.

What is Sync Harmony?

Sync Harmony provides users the ability to synchronize fund information between each product. **Sync Harmony** provides the missing link that will duplicate information, eliminating double entry. This information is specific to the Description and Attribute fields from a fund or constituent/vendor in Financial Edge to its counterpart fund in Raiser's Edge. This provides consistency between funds and reduces the time to manually maintain this information in two disparate systems. In addition, **Sync Harmony** allows users to create funds in Financial Edge, and then the solution automatically creates the same fund in Raiser's Edge.

How does Sync Harmony work for nonprofit foundations?

Sync Harmony presents the user with a configuration interface that allows users to select and map the fields that they want synchronized. Once fields are selected and mapped to sync, every time a fund or constituent/vendor is saved in Raiser's Edge or Financial Edge, the sync configured by a specific user happens and a message displays indicating so. Essentially, **Sync Harmony** duplicates information from one product's funds and constituents/vendors to another product's funds and constituents/vendors. This solution is desktop based and only works if installed on a user's workstation. This solution is not a server based product.

Why is Sync Harmony important?

Sync Harmony cuts the amount of time inputting data into both Financial Edge and Raiser's Edge in half since the user now inputs the data in one solution and it transcribes over into the other solution. This allows for a more consistent approach to data management.

What is the cost of Sync Harmony?

Purchase of **Sync Harmony** is more than affordable as it provides a higher quality of data management and costs less than the time it takes for a user to enter in data information in both Financial Edge and Raiser's Edge. For information regarding pricing along with any other questions pertaining to the solution, please contact Barton Dyson, Senior Vice President of Sales of the Nonprofit Division of Fusion Labs, Inc., at bdyson@fusionlabs.net.

Who is behind Sync Harmony?

Sync Harmony was developed by the Nonprofit Division of Fusion Labs, Inc. Fusion Labs Nonprofit Solutions is focused on the creation and implementation of software for the nonprofit industry. The Nonprofit Division partners with nonprofit organizations to provide point solutions, reports, customizations, consulting services, and hosting.

How is Sync Harmony managed?

Sync Harmony is managed by Fusion Labs Nonprofit Solutions Division. The Plug-In is easy to assemble. It is implemented and configured by the user on each work station. Assuming Raiser's Edge and Financial Edge are already installed at a user's workstation, run the install program for the **Sync Harmony** Plug-In and configure the sync settings in the **Sync Harmony** user interface. The screenshot below shows an example of a configuration in **Sync Harmony** using a sample data set.
